

SCENARIO IN ENGLISH (CBL)

A family came to the primary care dental practice. Father in the family would like to make a denture because of his missing teeth and the mother would like to replace her old removable denture which is made by an other dentist. She explained the removable denture is not comfortable anymore and abutment teeth is tilting. A month ago they did scaling treatment. The primary care dentist's examination of the family showed similar symptoms; tilting without caries, destruction of periodontal tissue & alveolar bone and bad OHIS assessment. The primary care dentist decided to do integrated and holistic care, visit and investigate their house and environment. Mineral content in the drinking water has higher level of Mg, Sn, Zn dan Fe was found. The dentist did implementation of "5 star doctors" (WHO), arranged public screening, treatment for children, finding possible risk factors, implement promotive and preventive efforts.
